### Efficient. Transparent. Reliable.

Trilogy presents TIES, the cutting-edge Transaction Management system tailored specifically for pipeline companies engaged in transporting CO2. Designed to streamline your operations and maximize profitability, TIES is the ultimate solution to meet the unique demands of the CO2 pipeline industry. With TIES, you gain complete control over your pipeline activities, ensuring smooth operations from capture to offtake hubs and sequestration.

#### Effortless Scheduling and Volume Management

TIES empowers your customers with a user-friendly interface, allowing them to seamlessly log on and nominate their CO2 product on your pipeline. Our advanced scheduling system ensures efficient nomination management, confirmations, curtailments, MDQ management, imbalance management, and allocation of pipeline volumes and capacity for optimal product transport. With TIES, you can effortlessly monitor and manage your CO2 transportation activities in real-time.

#### Settlement and Reporting

Accurate settlement is paramount in the CO2 pipeline industry, and TIES excels in quickly finalizing settlements and distributing statements to customers. Daily flow reports, monthly statements, and invoices are generated seamlessly, ensuring transparent communication with your customers and enabling swift financial reconciliation.

#### Robust Contract Management

Managing complex volume commitments and intricate contract terms is made simple with TIES. Our sophisticated contract management module enables you to handle arrangements, ensuring compliance with contractual obligations and mitigating risks. TIES empowers you with the tools to effectively monitor volume commitments, manage imbalances, handle curtailments, layered capacity tranches, tiered fee structures, and efficiently monitor and implement contractual terms. With TIES, you can navigate the intricacies of CO2 pipeline contracts with ease and confidence.

#### Seamless Integration and Data Exchange

TIES seamlessly integrates with multiple measurement, pricing, trading, and accounting systems and enables smooth data exchange, ensuring a streamlined workflow. From capturing nominations to settlement, TIES facilitates efficient data management and enhances operational efficiency. With TIES, you can minimize manual errors, automate processes, and ensure consistent and accurate data throughout your pipeline operations. TIES supports full import and export capabilities in Excel and makes most data accessible via APIs.
